ABSTRACT:

PROBLEM TO BE SOLVED: To provide a beautiful basket body capable of forming a coating film good in adhesion and excellent in rust preventing force by producing a magnesium alloy molded body by a mold method using a release agent and removing the release agent on the surface of the molded body before a chemical conversion treatment therefor.

SOLUTION: By a mold method using a silicone resin as a release agent, a magnesium alloy molded body obtd. by alloying Al, Zn and Mn to Mg is produced. This molded body is subjected to treatment of deburring, threading, degreasing or the like, and, the release agent on the surface of the molded body is removed preferably by a surface grinding method by buffing or an etching method using an alkaline soln. of pH 8 to 12 (e.g. of sodium metasilicate, sodium sulfate or the like). Then, it is immersed into an aq. soln., e.g. of permanganic acid or manganic acid, is subjected to chemical conversion treatment and is thereafter applied with a coating by spraying an acrylic resin coating material, an epoxy resin coating material or the like.

ABSTRACTED-PUB-NO: JP2000160356A

BASIC-ABSTRACT:

NOVELTY - Manufacture of a magnesium alloy casing comprises preparing a magnesium alloy molded part by a molding method using a mold releasing agent, removing the mold releasing agent formed on the surface of the molded part and applying a chemical conversion coating to the molded part to form a coating film.

USE - Production of an attractive magnesium alloy casing for use in a personal computers, cellular telephones or television sets.

ADVANTAGE - The coating film has improved adhesiveness and rust preventive.
